

The ICP landing page: what search optimisation delivered in six months

On 8 January 2026 we began on-page search optimisation across the Scientific Services website. The ICP page was one of the first. We rewrote it around what customers search for and what they need to know before they buy, made it far easier to read, and added clear calls to action. Six months on, the page has climbed from position 20 to position 5 on Google, sessions are up 559%, and the ICP Section Lead reports a marked rise in enquiries.

Six months before the work (21 July 2025 to 21 January 2026) compared with the six months after (21 January to 21 July 2026). Source: Google Analytics 4 and Google Search Console.

READING THE NUMBERS

Impressions roughly doubled, but clicks more than quadrupled. That gap matters. It means the page is not simply being shown to more people, it is being chosen more often when it appears. Click-through rate more than doubled, from 0.15% to 0.32%, which is the clearest signal that the rewritten title, description and content speak to the customer rather than to us.

Position 5 is the other headline. Moving from page two to the top five on Google is the difference between being findable in theory and being found in practice, and the traffic figures show exactly that.

WHAT WE CHANGED

- Rewrote the page around the language customers actually use, treating ICP-MS and ICP-OES as separate buying decisions.
- Restructured the page title, headings and metadata so search engines can read what the service does.
- Led with customer outcomes, regulatory compliance, quality control and environmental monitoring, rather than with instrumentation.
- Added an applications section mapping the service to five customer sectors, and an FAQ section answering the practical questions customers ask before enquiring: which elements, how much sample, how long.
- Added three clear Request a Quote calls to action, plus a named expert with photograph and direct contact details.

WHAT IT MEANS COMMERCIALLY

"I am definitely getting more enquiries via the website. A couple have mentioned elements listed in the FAQs, and one said they found us through Google."

Fiona Sturgeon, ICP Section Lead

That is customer behaviour confirming the diagnosis. People are arriving through Google, reading the FAQs we wrote for them, and picking up the phone.

We should be equally clear about what we cannot yet prove. Enquiries currently arrive as direct email to the section lead, so they sit outside our CRM and cannot be counted automatically. We closed the first half of that gap on 21 July by adding click tracking to the Request a Quote buttons, which recorded its first three clicks on day one. The next step is to replace the email link with an on-page form, so that every enquiry, and the value of the work it becomes, is captured and reported.

RECOMMENDATION

Roll this approach out across the remaining Scientific Services pages, working in commercial priority order. The method is proven, documented and repeatable. It carries no media spend and no agency fee, only marketing time, and the ICP page shows what six months of compounding search visibility is worth to a single service. The constraint is capacity, not capability, and I would welcome a discussion about how we resource the rollout at pace.
