

New services: client outreach plan

1.

Introducing the new testing services (metals, pesticides, aflatoxins, ochratoxin A, residual solvents, 3-MCPD and terpene profiling) to clients who already know and trust the lab.

One short email, adapted slightly for each client sector, sent to existing contacts before any public launch.

2.

The same message goes to everyone. Only the opening line and the list of services change by sector.

Subject: New testing services from the laboratory you already trust

Hi [First name],

[Opening line tailored to the sector, see section 3.]

We're expanding our analytical services at Mylnefield Lipid Analysis. Alongside the lipid testing you already use, we will soon be able to offer: [the two to four services most relevant to the sector, from: heavy metals, pesticide residues, aflatoxins, ochratoxin A, residual solvents, 3-MCPD, terpene profiling].

These have regulated maximum levels, and all will be delivered from the same laboratory, by the same team, to the same standards you know: ISO9001 certified, working to GMP and GCP in MHRA and FDA approved facilities.

One laboratory, one point of contact, one set of reports. Fewer suppliers to qualify, audit and chase.

We're speaking to existing clients first, ahead of any wider launch. If these services would simplify your testing, we'd welcome a short call to understand what you need and when.

Just reply to this email, or book a time that suits you: [booking link]

Best wishes,

Claire Traynor, Head of Lipid Analysis

Mylnefield Lipid Analysis, a Hutton Scientific Services product

3.

Sent to our existing client base, grouped into six sectors, each with its tailored opening line:

Fish and marine oil producers, refiners and encapsulators | Metals, pesticides, residual solvents

Opening line: "As a producer of marine oils, you'll know the pressure to evidence heavy metal and contaminant levels at every stage of refining. We can now help with that alongside your existing lipid testing."

Seed and plant oil producers and refiners | Metals, pesticides, 3-MCPD

Opening line: "If you refine or trade vegetable oils, 3-MCPD limits will be firmly on your radar. We can now test for process contaminants in the same samples we already analyse for you."

Infant formula and baby food manufacturers | 3-MCPD, metals, aflatoxins

Opening line: "For infant nutrition, contaminant limits are tighter than anywhere else in food. We can now support your compliance testing from the same laboratory that handles your lipid analysis."

Food and drink manufacturers | 3-MCPD, aflatoxins, ochratoxin A, residual solvents

Opening line: "Process contaminants and mycotoxins carry legal maximum levels across a wide range of foodstuffs. We can now cover these alongside the analysis you already trust us with."

Supplement and nutraceutical manufacturers | Metals, residual solvents, aflatoxins

Opening line: "Botanical and oil-based supplements face growing scrutiny on heavy metals and solvent residues. We can now test for these in the products we already analyse for you."

Pharmaceutical manufacturers and CROs | Residual solvents, metals

Opening line: "Residual solvent and elemental impurity testing sits alongside the GMP lipid work we already deliver for you, from the same MHRA and FDA approved facilities."
